

YASHASVI NAGAR

Boston MA | nagaryashasvi11@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Graduate student in Information Systems at Northeastern University with hands-on experience building LLM-powered agentic AI systems, data pipelines, and knowledge graphs. Skilled in Python, SQL, and cloud platforms (Azure, Databricks, Snowflake), with end-to-end experience from raw data ingestion to production ML models. Passionate about applying LLMs and RAG to extract knowledge from complex engineering data and accelerate mission-critical work.

EDUCATION

Northeastern University

Master of Science in Information Systems

Boston, MA

Expected December 2026

Related Courses: Data Management and Database Design, Designing Advanced Data Architectures for Business Intelligence, Data Science Engineering Methods and Tools, Natural Language Processing Methods and Tools, and Knowledge Graph with GenAI and LLM

Acropolis Institute of Technology and Research

B. Tech in Computer Science and Engineering

Indore, MP, India

June 2024

Related Courses: Database Management System, Data Structure and Algorithm, and Machine Learning

SKILLS

Programming: Python, SQL, R

AI/ML: GraphRAG, Knowledge Graphs, LLMs, BERT, DialogueRNN, NLP

Data Engineering & Cloud Tools: Microsoft Azure, GCP, Databricks, PySpark, Delta Lake, Snowflake, ETL / ELT Pipelines, Medallion Architecture

Databases: Neo4j, SQL Server

Visualization Tools: Tableau, Power BI

Tools & Methodologies: Streamlit, Alteryx Designer, ER/Studio, Agile/Scrum, EDA, Data Governance

AI Full-Stack Engineer Co-op, CareerGPT

January 2026 – June 2026

- Developing GraphRAG-based features for an AI-powered web application to enable context-aware knowledge retrieval.
- Designing and optimizing graph data models to support scalable querying and efficient information linking.
- Collaborating with the Technical Co-Founder on feature design, user experience flows, and system improvements.
- Building, testing, and deploying full-stack AI features while writing clean, maintainable, production-ready code.

Intern, Cummins Turbo Technologies

October 2023 – February 2024

- Worked on a live project focused on image processing and computer vision using Python and OpenCV.
- Collaborated with cross-functional teams to enhance real-time processing performance and optimize system efficiency.
- Implemented object detection and image analysis features using OpenCV libraries in Python.
- Followed Agile methodology for iterative development, sprint planning, and regular project updates.

PROJECTS

MediQuery – Clinical Analytics Platform with Safety-First AI

Summer 2026

- Building an end-to-end healthcare data pipeline processing synthetic FHIR patient records through Snowflake Medallion architecture with dbt transformations across bronze, silver, and gold layers.
- Designing a safety-first GraphRAG agent on Neo4j with mandatory citation guards and confidence scoring, rejecting any AI response not grounded in source FHIR resources.
- Implementing multi-tier role-based access control (Doctor, Researcher, Admin, Patient) and a natural-language cohort builder for clinical queries.

CrimeGraphRAG – AI-Powered Crime Investigation System

Fall 2025

- Developed an LLM-powered investigation agent using Neo4j and GraphRAG with reduced hallucination.
- Built complex knowledge graph modeling crimes, suspects, locations, organizations, and evidence.
- Implemented NetworkX visualizations in Streamlit for exploring criminal connections and patterns.
- Designed a conversational AI dashboard with real-time stats and role-based access control for multiple user roles.

IMDb Data Warehouse & Analytics Platform

Fall 2025

- Engineered an end-to-end BI pipeline in Snowflake following Medallion architecture to integrate seven IMDb datasets.
- Profiled raw data with Python and Alteryx, then unified schemas with audit columns for full row-level traceability.
- Developed ETL pipelines in Azure Data Factory and Databricks with validation checks and row-count reconciliation at each stage.
- Delivered Power BI dashboards on top-rated titles, crew influence, runtime trends, and regional release patterns.
